📁 Experience

Senior Web Developer, Vital Design

November 2021 - Present

- Craft client WordPress sites using agency themes and plugins converting Figma designs into responsive, performant, and accessible sites.
- Spearhead work on client proprietary, Laravel-driven ecosystem for product catalog aggregation with React Point-of-Sale front-end.
- Responsible for scoping, estimation, planning, and production of development projects within sub-set 'pods' within our organization.
- Collaborate with analytics team to create performant and digestible javascript solutions for complex Google Tag Manager implementations.
- Build React-powered custom blocks for WordPress Full-Site-Editing themes.

Senior Web Developer, Wedü

February 2012 - November 2021

- Develop, test and document various client web interfaces ranging from SaaS-model direct marketing platforms, custom Content Management Systems, membership eCommerce platforms, custom WordPress themes, custom WordPress plugins and static HTML sites all built to be responsive and cross-browser compatible.
- Involved in every step of the development life-cycle from concept, to specification, to estimation, and finally to production.
- Collaborate with creative department and account managers to develop soundest approach in order to deliver on client's needs while maintaining budgetary restraint.
- Responsible for vetting client business needs against potential third-party solutions versus custom internal solutions.
- Take design concepts from vision to reality delivering solutions based on SEO best practices and page optimization for load-time and mobile concerns all while delivering a highly stylized, modern front-end.
- Maintain internal template used as boilerplate for custom CMS-driven sites.
- Mentor junior developers on best practices and approaches for building object-orientated, MVC architecture. Learn new technologies as needed to deliver on the client's needs. Integrated with Authorize.net, Stripe, MMS Education custom API, Facebook API & SDK, Twitter SDK, Flickr API, ExactTarget/Salesforce Marketing Cloud API, NCR Customer Power email delivery system and many others.

Web Developer, Blue Seal Feeds

January 2003 - February 2012

- Stepped forward for dual role continuing Application Support Development while piloting new role of Web Development.
- Responsible for design and maintenance of all branded websites.
- Streamlined original code for optimal scalability, maintenance and usability.
- Integrated site search with Google Analytics to better track user activity and trends and isolate needs from real use-cases.
- Developed user opt-in system for coupons and promotions for SentinelFeed.com and ByNaturePetFoods.com to help generate interest in product and develop a database of end-users for future promotions.
- Built Frequent Buyer system to enroll and process new entries for multiple brands that integrated between consumer-facing web presence and proprietary internal system.
- Developed interactive Dealer Locator systems for multiple brands that captures input and reports results for trend analysis.

Application Support Developer, Blue Seal Feeds

October 2001 - February 2012

- Developed transition of proprietary Point-of-Sale system for company stores from ASCII COBOL interface to GUI VB.NET interface utilizing MSSQL.
- Revised inventory management aspect of system for more detailed reporting of demand expectation and streamlined ordering through direct distribution channel.
- Built system with scalability in mind so we could offer the software to our privately owned dealer network.
- Managed project for revisions, bug fixes and enhancements as reported via user network.
- Designed and developed proprietary COBOL-based GUI internet portal for dealer network that allowed for locations to develop customized retail pricing scheme that would react to market-driven cost changes.

👍 Technical Philosophy

- **Quality First:** Firm believer in "doing the job right the first time" to avoid costly rework and ensure code integrity.
- **Lifelong Learning:** Passionate about experimenting with latest web technologies to better understand their application in achieving business goals.
- **Standards-Driven:** Committed to building adaptive websites that strictly adhere to current best practices and accessibility standards.

👍 Skills

- PHP
- CSS / Sass
- Javascript
- MySQL
- WordPress
- React
- Laravel
- VueJS
- Git
- Tailwind
- Bootstrap
- CodeIgniter
- Agile Methodologies
- Google Tag Manager

👍 Education

BS Information Technology

Southern New Hampshire University
